

Magnaflo Systems (MFS) supplies under balanced drilling equipment and coil tubing rigs to the European oilfield market. We have recently introduced the HUWE to our customers and are seeing great results.

MFS is using the HUWE 4" 602, 2" 602, 2" 1502, 3" 1502 and the 3" 206 and have noticed that the HUWE has greatly decreased the damage to hammer unions, electronic pressure sensors, and pressure gauges. We also believe the HUWE will have a long-term impact on safety statistics as a result of field workers no longer having to use sledge hammers to remove the unions.

From now on, when MFS sells under balanced drilling equipment packages, it will be mandatory to have a HUWE with every pipe tub.

Thank you, HUWE Inc. for your great design.

President of Magnaflo Systems Inc.
